

Spray System Cleanout Recommendations

After using Engenia™ herbicide, clean all mixing and spray equipment (including tanks, pumps, lines, filters, screens, and nozzles) with a strong detergent or commercial sprayer cleaner.*

1. After spraying, drain the sprayer (including boom and lines). Avoid allowing the spray solution to remain in the spray boom lines overnight or for extended periods of time.
2. Flush tank, hoses, boom, and nozzles with clean water. Open boom ends and flush if so equipped.
3. Inspect and clean all strainers, screens, and filters.
4. Use commercial sprayer cleaner containing strong detergents according to the manufacturer's directions.
5. Wash all parts of the tank, including the inside top surface. Start agitation in the sprayer and thoroughly recirculate the cleaning solution for at least 15 minutes. All visible deposits must be removed from the spraying system.
6. Flush hoses, spray lines, and nozzles with the cleaning solution for at least 1 minute. Remove nozzles, screens, and strainers, and clean separately in the cleaning solution after completing the above procedure.
7. Drain pump, filter, and lines.
8. Rinse the complete spraying system with clean water.
9. Clean and rinse the exterior of the sprayer.
10. Appropriately dispose of all rinsate in compliance with local, state, and federal requirements.

Best Use Recommendations

- If applicable, clean the spray inductor following steps as detailed on the left.
- Eliminate “dead spaces” by removing all end caps, spray nozzles, screens, filters, and opening all valves to ensure complete spray system cleaning.
- When possible allow commercial spray cleaner and/or detergent solution to set in boom overnight.

*If your sprayer is equipped with an automated self-cleaning system, follow manufacture guidelines to ensure proper spray system cleanout.
