

Nexicor™ Xemium® brand Fungicide

Cereal growers now have a new fungicide that's powered by proven technology and engineered to control powdery mildew, tan spot, rusts and other diseases that affect cereals. With Nexicor fungicide, growers benefit from three trusted and proven active ingredients in a convenient premix formulation that delivers long-lasting preventative and post-infection disease control. Beyond controlling disease, Nexicor fungicide can also deliver plant health benefits like growth efficiency through increased photosynthesis as well as stress tolerance, resulting in healthier leaves and stems, and a cleaner flagleaf, which may lead to increased yields and quality.

How Nexicor™ Xemium® brand Fungicide® Works

Nexicor fungicide is a convenient and flexible solution for healthier cereal crops and stronger yield potential.

When it comes to producing wheat and other cereals that stand above the rest in quality and yield, **Nexicor** fungicide from BASF is the smart choice. **Nexicor** fungicide is engineered with the cereal grower in mind and is powered by three trusted active ingredients for cereals that provide proven residual control, consistent results and strong resistance management.

Even in times of low disease pressure, the plant health qualities of **Nexicor** can help promote nitrogen assimilation, increased photosynthesis and stress tolerance. These attributes can result in healthier leaves and stems, plus a cleaner flagleaf may help boost yields and grain quality.

Nexicor fungicide offers a wide application window from tillering to flag leaf. The rate flexibility allows cereal growers to tailor the rate based on their operation's specific needs, whether it's a dryland or irrigated acre, or their unique cereal-growing conditions. Moreover, the EC formulation provides maximum compatibility with other tank mix partners such as herbicides, insecticides and nutritionals.

Powered by the same trusted active ingredients as **Headline®** fungicide and **Xemium®** fungicide, combined with **Propiconazole** in a convenient premix formulation, **Nexicor** fungicide controls:

- >> Powdery mildew
- >> Tan spot
- >> Rusts
- >> Plus other diseases found in cereal fields

Nexicor fungicide provides a variety of convenient and flexible solutions:

- >> It has a wide application window from tillering to flag for the grower's convenience.
- >> Rate flexibility allows cereal growers to utilize the rate based on the needs of their operation and cereal-growing conditions.
- >> Multiple tank mix options result in fewer passes and saved time.
- >> EC formulation delivers maximum compatibility as an effective cross-spectrum tank-mix partner.

Always read and follow label directions.
